

Hey Mel, you're using an awful lot of water. You should take a shower instead.

There's plenty of water! It just pours right out of the tap!

Um, Mel, you should turn off the faucet while you brush your teeth. It wastes about 5 gallons of water when you leave it on.

It's just a little bit of water. What I do won't make any difference.

Mel, you should not water your garden when it rains because it's just wasting it more.

You think I'm going to let my neighbor's yard be prettier than mine nope.

Uh, Mel? Have you checked your toilets for any leaks it might have.

No... why should I though?

No offense Mel, but you're a water waster. A short shower uses a lot less water than a full bath. You can save hundreds of gallons a year by turning off the faucet when you're brushing your teeth and checking for leaks. If you want to show your neighbors, try to see who has the lowest water bill.

Maybe she has a point.
